

Partner Meeting — Summary & Action Plan

Concealed Knowledge • Gun License NYC

Meeting of July 8, 2026 | Prepared July 8, 2026

01 The Two-Company Model

CONCEALED KNOWLEDGE

Role: Pure education hub — the top of the funnel.

Offers: Quizzes, permit requirements, cost breakdowns, trainer directory, and a visual map of every shooting range in greater NYC (NYC + ~10-mile radius first, then New York State).

Monetization: Affiliate/referral commissions on genuinely recommended gear — safes (Amazon, City Safe NYC via Roy), holsters, range bags, eye/ear protection — plus possible NRA course links.

Positioning: Complementary to ranges, never competitive. Fills a real gap: Google shows only a handful of ranges and pricing info is broken/hard to get.

Cost: ~\$50–60/yr in domains. One closed referral deal returns ~10x.

GUN LICENSE NYC

Role: Conversion + operations platform — the bottom of the funnel.

Offers: Onboards interested applicants into the licensing process AND serves as a management portal for the pros (instructors/facilitators) who guide them.

Value to pros: Streamed leads from our funnel, plus tooling — organized document handling, autofill forms, easier NYPD portal uploads, quick client communication (text/email), status visibility for the client.

Pilot: Yariv is the first pro; A/B test the workflow with him and iterate on his feedback.

Model: Pros keep onboarding their own clients through the system and also receive our leads.

THE FUNNEL: Range visitors & searchers → Concealed Knowledge (educate + build trust) → Gun License NYC (start the license process) → Matched with a pro who manages them on our platform

02 What We Discussed — Key Points

- 1 Range map as the flagship feature.** A beautiful, complete map of all 50–70+ shooting ranges in greater New York on Concealed Knowledge. Google surfaces only 6–8 broken results; we present the full picture with pricing (e.g., lane costs) gathered by visiting and calling ranges directly — data that isn't presented properly anywhere today.
- 2 NFC / QR plaques inside ranges.** Cheap NFC cards + QR plaques placed in partner facilities answer visitors' common questions via our site. Each code routes to a location-unique dashboard, so any lead generated is automatically credited to that range. Unique-IP visits also boost SEO organically.
- 3 Keep Concealed Knowledge strictly knowledge-first.** Agreed positioning: answers and solutions first; funneling to our services and partner referrals happens naturally through the content. This keeps ranges comfortable partnering — we're complementary, not competitive.
- 4 Referral economics.** Amazon-style referral links on recommended products; direct deals (Roy / City Safe NYC) for high-end safes. A client who buys from a recommendation is more likely to become a returning client.
- 5 The market opportunity.** NYC residents largely don't know they can get a license (e.g., the Ron Miller conversation). The industry has poor visibility and bad SEO; incumbents are old. ~12M New Yorkers, culturally locked to the city. New York State kept as insurance for scaling.
- 6 Launch philosophy.** Concealed Knowledge is light and nearly ready — put it out, start basic marketing, collect feedback, iterate fast. Little to lose, everything to learn.
- 7 Learning the process firsthand.** One partner will personally go through the NYC license process (documents, NYPD uploads) to understand every step, meet the people involved, and be able to onboard others credibly.

03 Action Items — Next Steps

PRIORITY	ACTION	DETAILS	TRACK
NOW	Validate the range list	Re-run the firearm-range list through an enhanced prompt to confirm completeness and catch any missed ranges across greater NY.	Concealed Knowledge
NOW	Build the interactive range map	Integrate the validated list into Concealed Knowledge as a visual map with nearest-location logic. Scope v1 to NYC + ~10 miles (incl. the Bronx).	Concealed Knowledge
NOW	Finish pre-launch polish	Align product photos with the correct firearms; complete remaining visual tweaks; add a way to process leads.	Concealed Knowledge
NOW	Launch Concealed Knowledge	Go live, start basic marketing, show it to people, and route feedback into a rapid update loop (feedback → push → review → update).	Concealed Knowledge
NEXT	Collect real pricing data	Visit and call ranges to capture lane prices and practical details Google can't show; publish as structured data on the map.	Concealed Knowledge
NEXT	Build the referral layer	Set up Amazon affiliate links (safes, holsters, range bags, eye/ear protection); pursue the Roy / City Safe NYC deal for premium safes.	Concealed Knowledge
NEXT	Explore NRA angle	Investigate becoming an NRA instructor and linking NRA courses/resources from the hub.	Concealed Knowledge
NEXT	Onboard Yariv as first pro	Run the pro workflow end-to-end with Yariv; A/B test flows; use his feedback to refine document handling, autofill, and NYPD-upload steps.	Gun License NYC
NEXT	Start the license process personally	One partner begins the NYC license process to learn every step firsthand and build credibility for onboarding pros and clients.	Both
LATER	Deploy NFC/QR plaques at ranges	Produce cheap NFC cards + QR plaques answering common visitor questions; each routes to a location-unique dashboard that auto-attributes leads to that range.	Both
LATER	Pitch ranges on partnership	Approach range owners: free premium placement on the map + attributed leads if they join the management platform (the martial-arts-site playbook).	Both
LATER	Automate the pro toolkit	Expand autofill documents, document organization, and streamlined NYPD portal uploads; automate every segment that doesn't need a human.	Gun License NYC

04 Advisor Recommendations — Outside-In View

Independent suggestions to strengthen the plan above. These were not discussed in the meeting.

COMPLIANCE & LEGAL

Get a firearms-marketing legal review early. NYC/NY firearms law is uniquely strict and changes often. Before launch, have counsel review both sites' content, claims, and lead-gen practices. A single misstatement about licensing requirements damages the trust that is your entire moat.

Plan around ad-platform restrictions. Google Ads and Meta heavily restrict firearms-related advertising. Your instinct toward SEO, content, and in-range NFC/QR distribution is right — treat paid ads as unavailable and double down on organic. This makes the content strategy below business-critical, not optional.

FTC affiliate disclosures. Every referral link (Amazon, City Safe, etc.) needs clear disclosure. Also disclose the common ownership of Concealed Knowledge and Gun License NYC — if a range owner discovers the connection later rather than from you, the partnership is dead. Lead with it: 'our education site feeds your business leads' is a selling point, not a secret.

DATA & PRODUCT

Treat the range database as a living product. Don't just validate the list once with a prompt — phone-verify every listing before launch (hours, prices, public access), timestamp each datapoint ('verified June 2026'), and re-verify quarterly. Stale prices destroy the credibility that differentiates you from Google.

Add a 'claim your listing' flow. Let range owners claim and update their own listing (like Google Business/Yelp). This turns your data-maintenance burden into your partner-acquisition funnel — every claim is a warm lead for the NFC plaque and the management platform.

Capture emails, not just clicks. Gate quiz results, a 'License Readiness Checklist,' or a cost calculator behind an email. An owned email list is the one marketing asset no ad platform can restrict, and it lets you nurture people through a months-long licensing decision.

Instrument attribution from day one. Every QR/NFC code, referral link, and CTA should carry unique tracking (UTM or per-location IDs). You'll need clean numbers to prove lead value to ranges and pros when you start asking them to pay.

BUSINESS MODEL

Define pro economics before scaling past Yariv. Decide now: per-lead fee, revenue share, or monthly subscription? Pilot pricing with Yariv even at a discount — a pilot that never pays teaches you nothing about willingness to pay.

Write the Yariv pilot down as a repeatable playbook. Document every step of onboarding him: forms needed, portal steps, response-time expectations, handoffs. The playbook — not the software — is what makes pro #2 through #20 fast to onboard.

Set a lead-response SLA. Licensing leads go cold fast. Require pros to respond within a set window (e.g., 4 business hours) and auto-reassign stale leads. Lead quality is your reputation with both sides of the marketplace.

Formalize the Roy/City Safe deal in writing. Even a one-page referral agreement (commission %, tracking method, payment terms) prevents the classic handshake-deal fallout once real money flows.

GROWTH & FOCUS

Own one cornerstone search query. Build the definitive 'How to get a gun license in NYC (2026)' guide — steps, costs, timelines, documents, FAQs with schema markup — plus a page per borough and per range. Programmatic SEO on an underserved topic is your cheapest durable acquisition channel.

Sequence, don't parallelize. The meeting covered map, launch, NFC, referrals, NRA, pilots, and pitching ranges. Suggested order: (1) launch Concealed Knowledge + cornerstone content, (2) Yariv pilot to a working playbook, (3) then NFC plaques and range pitches — pitching ranges is far stronger once you can show live traffic and a working lead flow.

Define 90-day success metrics now. Pick a handful and review monthly — e.g., organic sessions, email signups, license-process starts, leads delivered to Yariv, first referral revenue. Without numbers, 'play with it and see' drifts.

Protect the brands. Register trademarks/domains variants early, and keep the two sites' branding visually distinct so the education hub never reads as an ad for the license service.

Prepared from the July 8, 2026 partner conversation transcript. Advisor recommendations are business suggestions, not legal advice — consult a NY firearms attorney before launch.
